Schenker unveils complete water purification kit

October 04, 2021

Pick&Drink ensures unlimited quantities of fresh water are available onboard at all times

Schenker's Pick&Drink filters

Italian watermaker specialist Schenker has launched a complete water purification kit that ensures unlimited quantities of fresh, high-quality drinking water at all times.

With Pick&Drink, there is no need to carry onboard supplies of bottled water. The kit consists of a pair of pre-assembled filters that are normally installed inside a sink cabinet, along with a dispenser.

Thanks to the complete fittings kit supplied, the system is easily connected to the pressurised fresh-water system of a boat.

The first Pick&Drink filter is a 'carbon block' that removes impurities up to 5

microns, eliminating chlorine and bad odours. The second filter restrains impurities up to 0.15 microns. This reduces the potential bacterial load by 99.99%.

The cartridges, once exhausted, are easily replaced thanks to a practical bayonet connection with safety catch.
